

ABSTRACT OF THE DISCLOSURE

A speaker main body has a first magnetic member and a second magnetic member. The user can place the first and second magnetic members on the two sides of his or her ear. Through the magnetic force, the speaker main body is properly fixed onto the user's ear. The present invention can also be an ear-attachment device that can be attached to an ear phone. The ear-attachment device also comprises a first magnetic member and a second magnetic member.
